

Since 2011 the principal objective of the European Academy of Tumor Immunology (EATI) is to promote tumor immunology at the scientific and clinical levels. The EATI promotes all areas of tumor immunology, considered as a continuum between fundamental, translational and clinical research, as well as the practical implementation of diagnostic and therapeutic procedures in routine clinical practice. EATI strives for excellence, independence, leadership, diversity and flexibility. Throughout its work, the EATI provides independent, authoritative and evidence-based advice to underpin policy for stimulating the implementation of concepts, methods and procedures inspired by tumor immunology. The EATI fosters communication among all stakeholders from clinics, academia and industry with the annual Cancer Immunotherapy Conference (CICON) as international platform.
